EXELIXIS[®]

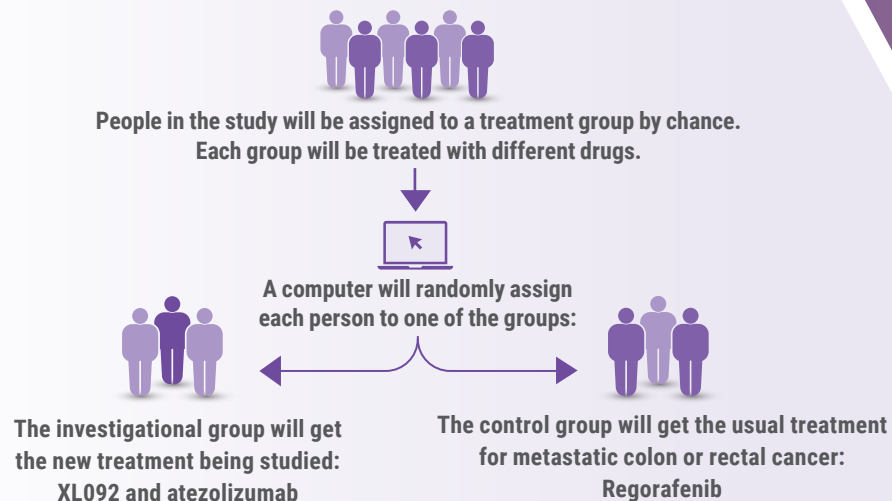

What is a clinical research study?

Clinical research studies help researchers and doctors learn more about medical conditions. Studies with drugs help researchers understand whether a study drug is safe and if it works well to treat a certain disease or condition.

Each study has requirements for who can or cannot join; this is called the eligibility criteria. You can volunteer to take part in a study if you meet these requirements. Your doctor can help you learn if a study may be a good option for you.

About the STELLAR-303 study

STELLAR-303 is a phase 3 study to see if the drugs XL092 and atezolizumab work when used together to treat metastatic colon or rectal cancer that continued to grow or spread after other treatments.

A doctor will carefully monitor the health and safety of each person in the study and watch for any side effects.

Who can take part in STELLAR-303?

You may be eligible if*

You are at least 18 years of age

You have metastatic colon or rectal cancer

Your cancer continued to grow or spread after treatment for metastatic colon or rectal cancer

*There are other eligibility criteria you must meet to join the study.

Talk to your doctor to learn more about this study and if it may be an option for you.

Questions for your doctor:

- 1 Do I have metastatic colon or rectal cancer?
- 2 Can we go over the treatments I have had?
- 3 How do I find out if I might be eligible for a clinical research study?
- 4 What do I need to know about taking part in a clinical research study?

THE COMBINATION OF XL092 AND ATEZOLIZUMAB IS NOT APPROVED FOR THE USE UNDER INVESTIGATION IN THIS TRIAL. SAFETY AND EFFICACY HAVE NOT BEEN ESTABLISHED.
